

**To the 2025 Specifications and Tolerances Committee,**

Dear Committee Members,

Garner Paving and Construction has been utilizing two Walz Volumetric Load Scanner systems as part of our operations, and we have experienced firsthand the improvements these devices provide in accurately and efficiently measuring material volumes for retail sale. These systems have proven far superior to traditional load measurement methods, offering consistent results and enhancing the transparency and accountability of our material tracking.

We strongly support the formal recognition of these devices in the marketplace and fully endorse the inclusion of specifications, tolerances, and technical requirements in *NIST Handbook 44* to guide their design, approval, and regulatory oversight. Establishing clear standards will help ensure fairness and accuracy across the industry while encouraging innovation.

We appreciate the Committee's efforts and look forward to continued improvements in measurement technologies that benefit both businesses and consumers alike.

Sincerely,

Michael Gillaspia
