About AMPECO

Enabling Compliant, Interoperable EV Charging Infrastructure

AMPECO is a white-label Charge Point Management System (CPMS) provider — the platform of choice for large-scale EV charging operators, serving 200+ Charge Point Operators (CPOs) and managing 300,000+ charge ports across EMEA, North America, APAC, and LATAM. Our fully hardware-agnostic platform supports 190+ charger brands, electricity meters, and payment terminals, ensuring no vendor lock-in for partners and site hosts.

Industry engagement

AMPECO is an active participant in the EV charging standards ecosystem in the EU, U.S., and globally — including CharIN, Open Charge Alliance, EV Roaming Foundation, and the OpenADR Alliance.

Managed charging programs & vendor recognition

AMPECO is officially recognized as a network provider across leading U.S. EV infrastructure programs. This includes California's CALeVIP — where AMPECO is the only pure software platform officially listed as eligible — and New York's NYSERDA Charge Ready 2.0. AMPECO is also listed by EPRI and EVCAN as an approved network software provider for over 20 utility programs nationwide, including Duke Energy, Xcel Energy, and SMUD, opening access to nearly $2 billion in public incentives. Our compliance-by-design architecture handles 15-minute interval data collection and automated reporting required to unlock these incentives, without locking clients into a specific hardware vendor.

Enterprise-Level Security & Compliance

AMPECO maintains ISO 27001, ISO 27017, and ISO 27018, ISO 27701 certifications and SOC II Type 2 compliance, with regulatory alignment across multiple jurisdictions including AFIR, NEVI, UK PCPR, and related reporting obligations.
