- 1) A specification is deemed current by original equipment manufacturer.
- 2) A specification is deemed obsolete if it is no longer marketed by the original equipment manufacturer as a current specification.
- 3) A specification is deemed superseded if the original equipment manufacturer deems the subsequent specification to be backward compatible to previous specifications.
- 4) A specification is deemed verifiable if necessary, bench and lab tests are available to verify the fluid's ability to pass those requirements set out by the original equipment manufacturer.
